Create. Share. Meet.
Meetings Streamlined with LG CreateBoard and DisplayNote Launcher

Corporations are always on the lookout for new ways to improve productivity and the quality of the work, increase employee engagement and empowerment, and set themselves apart from the competition.

Take for example the LG CreateBoard® Interactive White Board. Immensely more than just a whiteboarding tool, the CreateBoard works effortlessly in any OS environment.

With a universal platform you can use the board cloud-based (or web-based), use your licensed legacy software, or import other file types into CreateBoard Lab. Switch between systems effortlessly or harness the power of split-screen functionality for a truly adaptable engaging meeting.

LG OPS Player provides useful computing performance to LG CreateBoard. The LG OPS Player allows quick and easy updates by being easily slotted into LG CreateBoard fitting neatly.

Interactive displays in conference rooms can improve collaboration, communication, and engagement, and can be used to connect teams across the globe.

Now pair that with software that works just as smart and efficiently.

DisplayNote Launcher provides one touch access to your apps, video calls and calendars in all your meeting rooms.

Works with the tools you already use.

1 **The tools your users need.** Set up each space with the apps, links, and tools teams rely on. No clutter or confusion. Just fast access to what matters.

2 **Every meeting, ready to go.** Integrate with Microsoft or Google Calendar so users can see what's booked and launch their call with one tap, no searching, no delays.

3 **Adapts to every space.** Customize more than a logo or wallpaper. Use Edit Mode to move, resize, and arrange the home screen layout to suit your setup. Then screensaver can also display helpful info when the room is idle, like branding, guidance, or updates.

4 **Launch personal meetings + content.** When the room is free, users can scan a QR code to assess their personal meetings and files via the display. Everything's even wiped when they disconnect, keeping privacy intact.

5 **Quick access to cleanup.** Quick access to tools like Device Cleanup, so users can clear sign-ins, browser history, and open apps in seconds. This keeps the room secure and ready for the next meeting.

6 **Manage at scale. Control from anywhere.** Manage all your spaces from a single portal. Push changes, monitor devices, and stay secure, without stepping into the room.
